

SUMMARY

Interdisciplinary **undergraduate** pursuing dual degrees in **Computer Science Engineering** and **Psychology** with experience developing applications, **processing** and **analyzing data**, and **researching** adversarial perturbations in **machine learning models** through a **National Science Foundation** internship. Proficient in **Python, C++, and C#**, with practical knowledge of the full **software development lifecycle**. Strong foundation in **human-computer interaction** and **behavioral psychology**, applying these insights to improve **system design** and **user interaction** with technology.

EDUCATION

University of South Florida – Tampa, FL

[August 2021 – Present]

- Bachelor of Science in Computer Science Engineering
 - Bachelor of Arts in Psychology
-

PROFESSIONAL EXPERIENCE

University of Alabama – National Science Foundation

[May 2025 – July 2025]

Research Intern - Security for Energy and Intelligent Transportation Systems

- Researched **adversarial perturbations** on **machine learning models** for **autonomous vehicles**, identifying **vulnerabilities** in perception and **decision-making pipelines**.
 - Developed a real-time attack **simulation** environment in **Unity (C#)** with integrated **VR eye-tracking** to collect gaze and behavioral data.
 - Analyzed driver **decision-making** under **adversarial conditions** to generate improvements for **safer**, data-driven **system design**.
-

theCoderSchool

[June 2023 – November 2023]

Coding Instructor

- Taught **coding fundamentals** through **guided projects**, reinforcing logical reasoning, **problem-solving**, debugging, and **collaborative** development skills.
 - Led a **girls-in-tech initiative**, inspiring female students to pursue STEM by promoting confidence, inclusivity, and collaboration.
-

SKILLS

- Programming and Frameworks: Python, C, C++, C#, COBOL, Lua, HTML, React, .NET, Unity
 - Tools: Git, Jira, Slack, Microsoft Office Suite (Word, Excel, PowerPoint)
 - Psychology: Social, Cognitive, and Behavioral Psychology
-

PROJECTS

Student Networking App (In Progress) | Group

- Developing a **COBOL-based console platform** where students can create accounts, manage profiles, connect with peers, and access skill-building modules.
- Implemented **persistent file storage** to ensure **reliable data access** across sessions.
- Collaborating in a **team environment** utilizing **Agile practices (sprint planning, Jira, Slack)** and **Git/GitHub**.

Cover Letter Generator | Independent

- Built a **full stack React + TypeScript** app that **parses** resumes (PDF/DOC/TXT) and job descriptions, then **generates** tailored cover letters via **LLM APIs** (Groq, Hugging Face, OpenAI).
- Structured the front-end using **component-based patterns**, applied **modular CSS** for styling, and managed state on the client to ensure consistency and scalability.
- Enhanced usability with **real-time validation**, **progress indicators**, and **accessibility features** (dark mode, color).

Interactive Stock Visualization Tool | Independent

- Developed a **C#/.NET application** with modular **data-processing** pipelines to **clean**, **normalize**, and **filter** stock market datasets by ticker, date range, and chart type.
- Implemented **interactive time-series charting** to visualize trends and anomalies, **applying object-oriented design** principles to ensure **reliability and scalability**.
